🎓 EDUCATION

BS Artificial Intelligence, Air University, Islamabad

2020 – 2024

🧠 TECHNICAL SKILLS

Languages

Python, JavaScript

AI/ML

DeepFace, Face Recognition, Google Vertex AI, Veo, Imagen, RAG, FAISS, Sentence Transformers, LangChain, pandas, NumPy, scikit-learn, Supabase

Databases

PostgreSQL, SQLAlchemy, SQLite, Supabase

Frontend

React.js (Hooks, State Management), Vite

NLP

RAG, Tokenization, Text Processing, Google Cloud TTS, spaCy, Hugging Face Transformers

Authentication & Security

JWT, Session Auth, Anti-Spoofing, GPT-4o Vision

Backend

Flask, Django, Django REST Framework, REST APIs, Authentication, RBAC, Redis

Computer Vision

OpenCV, YOLO, face-api.js

Tools

Git, Unicorn, Nginx, Streamlit, openpyxl, Docker, Let's Encrypt (SSL), Linux VPS Administration, Whisper API, Apache

Cloud

Google Cloud Platform (Vertex AI, Cloud TTS), Oracle Cloud (VM deployment), Hugging Face Spaces (Docker)

📁 PROJECTS

ANUMIX – Pakistan's 1st AI Content Generation Platform, Flask · PostgreSQL · Google Vertex AI · FAISS

- Built full-stack production SaaS with Flask/PostgreSQL backend and React/Vite frontend, deployed on Linux VPS with Nginx and Unicorn
- Integrated Google Vertex AI (Veo for video, Imagen for images) and OpenAI for AI-powered content generation with subscription enforcement
- Implemented admin panel, 3-level referral system, manual bank payment flow, Google OAuth, and database-driven subscription management
- Architected scalable features including voice commands, multi-file chat attachments, RAG pipeline, and real-time video progress tracking

Live Site: app.anumix.com 🌐

FaceLog – AI Powered Attendance System, Django · React · DeepFace · GPT-4o Vision · OpenCV · openpyxl

- Built FaceLog, a full-stack AI attendance system using Django REST Framework and React/Vite, featuring real-time face recognition via DeepFace and live anti-spoofing detection powered by GPT-4o Vision to prevent photo/screen-based fraud
- Engineered a 5-angle guided face registration pipeline with duplicate face detection, office hours enforcement, and a fullscreen Kiosk Mode for employee self-service check-in/check-out with automated hours tracking
- Developed a protected admin dashboard with month-wise attendance records, paginated search/filter, bulk delete, and Excel report generation (openpyxl) with per-employee sheets and color-coded late/absent/half-day rows
- Implemented an automated payroll engine calculating per-day salary rates, late deductions (PKR 500/day), half-day penalties (50%), and paid leave allowances, exported as formatted multi-sheet Excel files per employee per month

AI Social Media Agent, GPT-4o · Serper Web Search · GPT-4o Vision

- Built an AI-powered social media agent using GPT-4o and Serper API that autonomously researches any topic on the web and generates SEO-optimized posts for LinkedIn, Twitter/X, and Instagram.
- Integrated GPT-4o Vision to analyze attached images and extract video frames using OpenCV, enabling context-aware post generation based on visual media.
- Designed a Flask REST API with multi-format input handling (text, image, video) and a prompt engineering pipeline that enforces platform-specific formatting rules for each social network.
- Built a responsive React + Vite frontend with a sidebar layout, tabbed post navigation, one-click copy functionality, and real-time loading states.

RAG-Powered Document Intelligence System, FAISS · Sentence Transformers · OpenAI GPT-3.5

- Built a full-stack AI document Q&A system using RAG, FAISS vector search, and OpenAI GPT-3.5 with multi-format support (PDF, Word, Images via OCR)
- Implemented semantic chunking, cosine similarity retrieval, and keyword boost re-ranking for accurate context extraction and fact-level precision
- Developed a React/Vite frontend with drag-and-drop upload, real-time Q&A, and professional dark UI
- Engineered a modular Flask REST API with Tesseract OCR, PyPDF, and python-docx for unified text extraction pipeline

PROFESSIONAL EXPERIENCE

AI/ML Engineer, Dream Weavers LLC, DHA Multan

09/2025 – Present | Multan, Pakistan

- Sole-developed ANUMIX (app.anumix.com ) , a production AI SaaS platform from scratch using Flask, React, and PostgreSQL. Deployed on CentOS VPS with Apache/Gunicorn, including automated CI/deploy pipelines via shell scripting.
- Integrated Google Vertex AI (Veo & Imagen) for end-to-end video and image generation pipelines, and built a real-time AI chat system with SSE streaming, Whisper voice input, multi-file attachments, and guest session tracking.
- Engineered a complete billing and monetization system including multi-tier subscription enforcement, manual bank payment flow with admin approval, and a 3-level referral system with commission tracking and withdrawals.
- Designed JWT-based authentication with role-based access control (RBAC) across admin, user, and guest tiers, alongside a fully featured admin panel covering user management, payment oversight, guest chat monitoring, and video template management.
